

FRANCO RODRIGO MIRANDA

SOFTWARE DEVELOPER | BACKEND & FULL STACK

Córdoba, Argentina | mirandafranco.ispc@gmail.com

LinkedIn | GitHub | Portfolio

Dear Hiring Team,

I am a software developer based in Córdoba, Argentina, focused on backend and full-stack development with Python, Django, REST APIs, PostgreSQL, and modern web technologies.

Through my recent projects, I have designed and delivered stable software systems covering data modeling, API development, authentication and authorization, transactional business workflows, automated testing, Docker, CI/CD, and frontend integration. My work includes a production-deployed inventory platform, a real-time collaborative application, and a full-stack e-commerce platform.

I enjoy solving practical problems and turning requirements into maintainable software. Alongside my technical experience, my professional background in teaching, technical sales, and production environments has strengthened my communication, adaptability, and ability to work with people from different backgrounds.

I am looking for an opportunity where I can contribute as a software developer, continue strengthening my engineering skills, and take part in building reliable, useful products within a collaborative team.

Thank you for considering my profile. I would be glad to discuss how my experience, projects, and way of working could contribute to your team.

Kind regards,
Franco Rodrigo Miranda
