💻 GitHub: <https://github.com/MirandaFrancoCBA>

Professional Summary

Junior Software Developer focused on **backend and full stack development**, with hands-on experience building modern applications using **Django, Django REST Framework, Angular, Docker, and JWT authentication**.

Currently developing real-world projects, including a **modular inventory management system** and a **mobile RPG game built with Godot**, applying scalable architecture principles and **AI-assisted development workflows**.

Strong foundation in OOP, SOLID principles, REST API design, and agile methodologies. Looking to join a development team where I can contribute from day one and continue growing professionally.

Education

Higher Technical Degree in Software Development

Instituto Superior Politécnico de Córdoba | 2023 – Present

Full Stack Developer Program

Codo a Codo – Buenos Aires City Government

Information Systems Engineering

Universidad Nacional de La Rioja (up to 4th year)

Music Teaching Degree

Instituto Superior de Arte y Comunicación

Featured Projects

SmartStock – Inventory Management System (Backend / Full Stack)

🔗 <https://github.com/MirandaFrancoCBA/SmartStock>

- Designed and developed a **modular backend architecture** using Django and Django REST Framework
- Built a fully featured **REST API** with filtering, search, ordering, and pagination

- Implemented **JWT authentication (SimpleJWT)**
 - Developed **role-based access control (RBAC)** with Admin, Staff, and Viewer roles
 - Implemented **inventory movement system** with automatic stock updates using Django Signals
 - Created **analytics endpoints** for inventory insights (stock value, low stock, top products)
 - Integrated **OpenAPI documentation (Swagger / ReDoc)**
 - Applied clean architecture principles with domain separation (products, inventory, services)
 - Planned frontend integration with Angular and containerization using Docker
-

Apocalypsheep – Mobile RPG Game (Godot + AI)

 <https://github.com/MirandaFrancoCBA/apocalypsheep>

- Developed a mobile RPG game using **Godot Engine and GDScript**
 - Designed a **scalable architecture** separating core logic, data layer, and UI
 - Implemented core systems: combat, enemy generation, loot, inventory, and progression
 - Added **local persistence system** for game state saving
 - Used **AI tools as development assistants** for coding, documentation, and planning
 - Managed development workflow using **Kanban methodology (GitHub Projects)**
 - Applied decoupled design principles to support future scalability
-

Technical Skills

- **Languages:** Python, JavaScript, SQL, HTML, CSS, GDScript
 - **Frameworks:** Django, Django REST Framework, Angular, FastAPI
 - **Tools & DevOps:** Docker (in progress), Git, GitHub
 - **Authentication:** JWT
 - **Databases:** SQLite, MySQL (PostgreSQL planned)
 - **Concepts:** REST APIs, OOP, SOLID, Backend Architecture
 - **Methodologies:** Agile (Scrum), Kanban
 - **Other:** AI-assisted development
-

Work Experience

Production Operator

Córdoba | 2021 – Present

Technical Sales Representative

La Rioja | 2009 – 2021

Music Teacher

La Rioja | 2010 – 2020

Languages

- Spanish: Native

- English: C1 (Advanced)
 - German: In progress
 - Japanese: In progress
-

Core Skills

- Analytical thinking
- Problem-solving
- Self-learning
- Teamwork
- Adaptability
